## NIAGARA METERS INTRODUCES ITS NEW LINE OF MAGNETIC FLOWMETERS - THE 6600 SERIES

SPARTANBURG, SC, April 2008— Niagara Meters is pleased to announce its new Magmeter 6600 Series line of in-line electromagnetic flowmeters.

The Magmeter 6600 series is fully submersible and is ideally suited for measuring flow of a variety of conductive liquids and slurries in applications requiring high reliability and low maintenance. Featuring bi-directional flow and empty-pipe detection capabilities, the 6600 series is equipped with a transmitter configured for outputs of 4-20 mA or pulse 24 VDC.

The 6600 series is available in line sizes ranging from ½-inch to 24 inches and with a variety of liner and electrode configurations to suit a broad range of applications. Available liner materials include PTFE and Ebonite, while electrodes are available in Hastelloy C, SS 316L, Titanium, Platinum-RH, or Monel. Agency approvals for the 6600 series include FM3810 (General) and FM3611 (Class 1, Div II, Group C&D).
